

Parents, please answer the following questions...

- ◆ *Does your child avoid work that seems complicated or hard?*
- ◆ *Does your child have difficulty comprehending and remembering?*
- ◆ *Does your child fail to complete tasks or works slowly?*
- ◆ *Does your child need instructions repeated?*

If you answered "Yes" to more than one of these questions, you may want to consider helping your child with a program that does not tutor your child but actually teaches Processing And Cognitive Enhancement = PACE. You may have heard about this program since it is the very same one used at Learning Rx, in Little Rock and across the nation, and has helped hundreds of students, ages 10 – 18, improve their memory and brain skills. Your child will be given a cognitive skills pretest before beginning the program to discern areas of weakness and a posttest at the conclusion of the program which will measure improvement. You may call this training: **BOOT CAMP FOR THE BRAIN!**

Nancy Armstrong, a Learner Services teacher at LRCA, is a licensed trainer and the only instructor in the state who is able to independently teach this program. It requires one-on-one instruction so openings are limited. The program meets for 36 hours of instruction and does require parental involvement and commitment to help your child practice the skills.

This summer the classes will be held at LRCA on Tuesdays, Wednesdays, and Thursdays beginning on June 15th. If you are interested in further details, please call Nancy Armstrong at the number listed below (leave a message if necessary) or send an email to the address given.
